

Cardiac MRI and Biomarkers in **Friedreich's Ataxia**

GOAL OF STUDY

- To learn more about heart disease in Friedreich's ataxia (FA) through new blood and imaging tests

WHO CAN PARTICIPATE?

- FA confirmed by genetic testing or healthy controls (people without a diagnosis of FA)
- 10 to 50 years old

WHAT WILL YOU BE ASKED TO DO?

- Undergo medical record review and screening for eligibility; provide consent; and complete a questionnaire
- Take a urine pregnancy test
- Give blood sample (1 tablespoon) three times during the course of the study
- Undergo one or two cardiac MRI tests
