

BE A PART OF THE IDEA STUDY

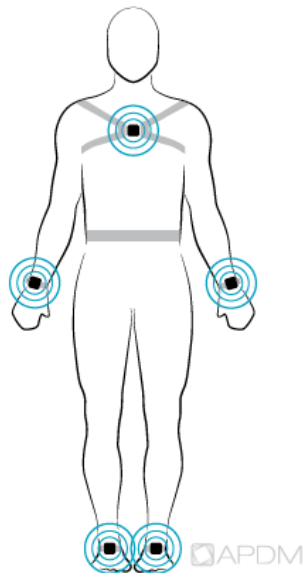

Instrumented Data Exchange for Ataxia

Participants are needed for a research study to help test body-worn sensors to measure movement during simple tests of coordination, in order to evaluate progression and severity of ataxia.

If you have a confirmed diagnosis of Friedreich's Ataxia (FA) you may be interested in participating in this study.

Must:

- Be 12-30 years of age, diagnosed with FA between ages of 5-25
- Be able to walk 10 feet independently, without an assistive device
- Be able to sit and stand unassisted for 30 seconds
- Have no other neurological or musculoskeletal disorder or conditions that could affect mobility
- Be willing and able to be a part of this 2 year study
- Consent to be videotaped while performing study assessments

Quick Facts about the IDEA study

2-year commitment with Apple Watch and iPhone provided

Study visits every 6 months at the University of Chicago

Compensation for participating

Travel reimbursement possible

PI: Christopher Gomez, M.D., Ph.D.
